

A close-up, high-contrast photograph of a Pöttker furniture joint. The image shows a silver-colored metal profile with a black plastic insert and a small metal pin. The background is blurred, showing more of the furniture structure.

PÖTTKER

Transforming furniture

MORE VALUE THROUGH FUNCTIONS

TRANSFORMING FURNITURE

Table and function: that is the core of what Pöttker does. That is where we come from. That is where our expertise comes from. From collaboration with our customers, in furniture production for more than 55 years and focusing largely on table production for almost 35 years.

From the expertise of this collaboration, we developed a unique modular system for various table functions, which you can combine however you like. It does not matter what you want the table to look like or which materials you want it built from. We have solutions for solid wood, veneers, MDF, HPL, glass, ceramic, marble, stone etc. Thanks to our comprehensive range of accessories, we deliver the entire package of functions from a single source.

1923

The company Pöttker was founded

99 Years

Experience in metal processing
in Germany and Europe

325

Employees in our headquarters
and the foreign branches

6 Continents

Operating in more than 40 countries
on 6 continents

4 Locations

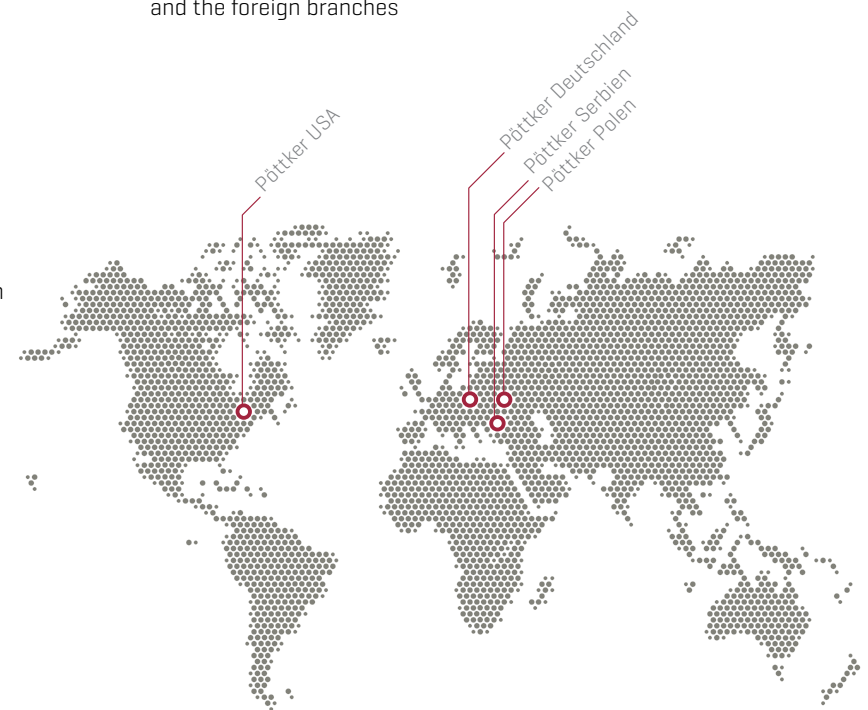

Our own development and construction

5,000 Tons

Steel that is processed every year

1,000 Tons

Aluminum that is processed every year

FROM CONCEPT TO DELIVERY

In recent years we have gained much experience with the complex processes which lead from the design idea up to shipment. Working in partnership with our customers, we have successfully realized projects of all sizes. The spectrum ranged from frame constructions and table frames with supplied table tops, to complete tables. Once the product portfolio and variant diversity has been specified, we produce, pack and ship your order. In your name and according to your stipulations. On commission, either on pallets or packed individually. That is our service offer for series orders of all frames, mounts and tables. We would be happy to execute your project too.

Development, design & construction

In-house development and cooperation with our customers

Toolmaking

Enables many special solutions and high flexibility

Production

Decades of experience provide the highest precision of components with modern machines

Administration

One contact person with a competent team in the background

Assembly

Both in large quantities and in individual solutions

Quality control

Verified checks on all products to ensure consistent quality

Logistics

Daily coordination of national and international shipments to deliver on schedule

RAW MATERIALS OF HIGHEST QUALITY

Strip-steel

Approximately 5,000 tons are delivered by selected German suppliers which are specialized in precision steel

Aluminum

For 98 % of the profiles we have our own tools with our own maintenance cycles. Our tolerances exceed even the DIN Standards. Precision is our priority

Accessories

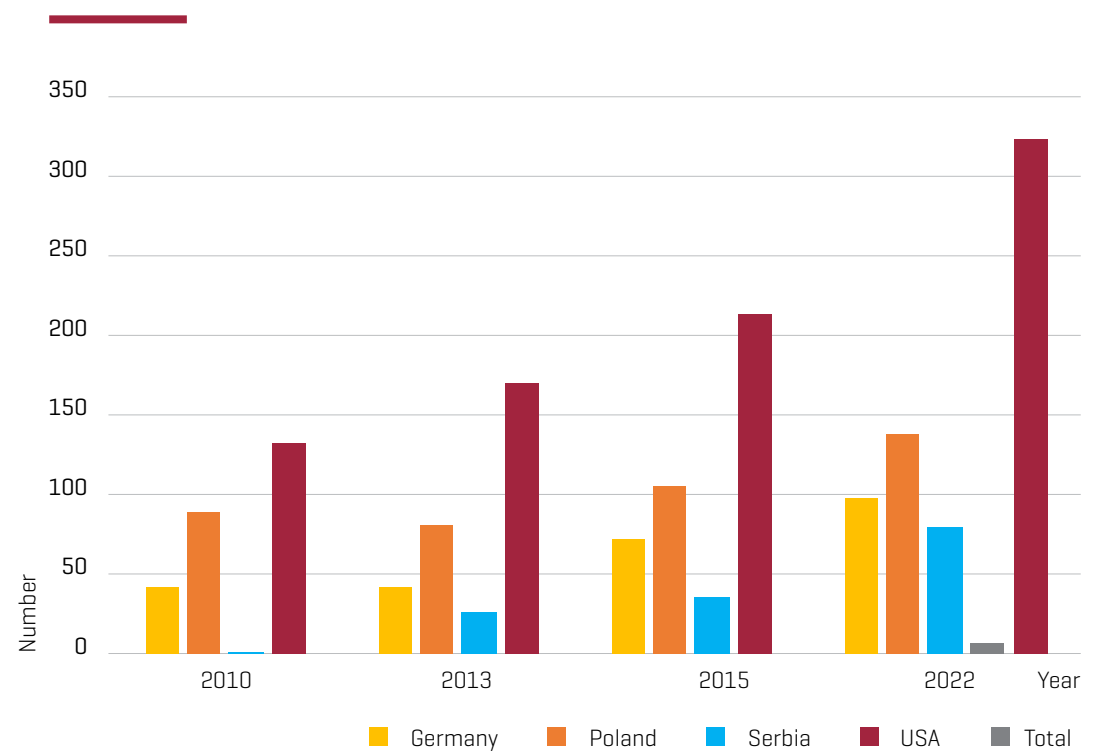

We manufacture most components ourselves. The others are supplied by local craft companies

CONTINUOUS GROWTH

Our number of employees is rising constantly.
Specialized trainings are supported by the
company and carried out regularly.

Business partners in 20 countries confirm
our intercultural competence.

Employees worldwide

WE ARE SPECIALIST FOR FUNCTION & TABLE

We offer you the maximum flexibility for functional furniture.

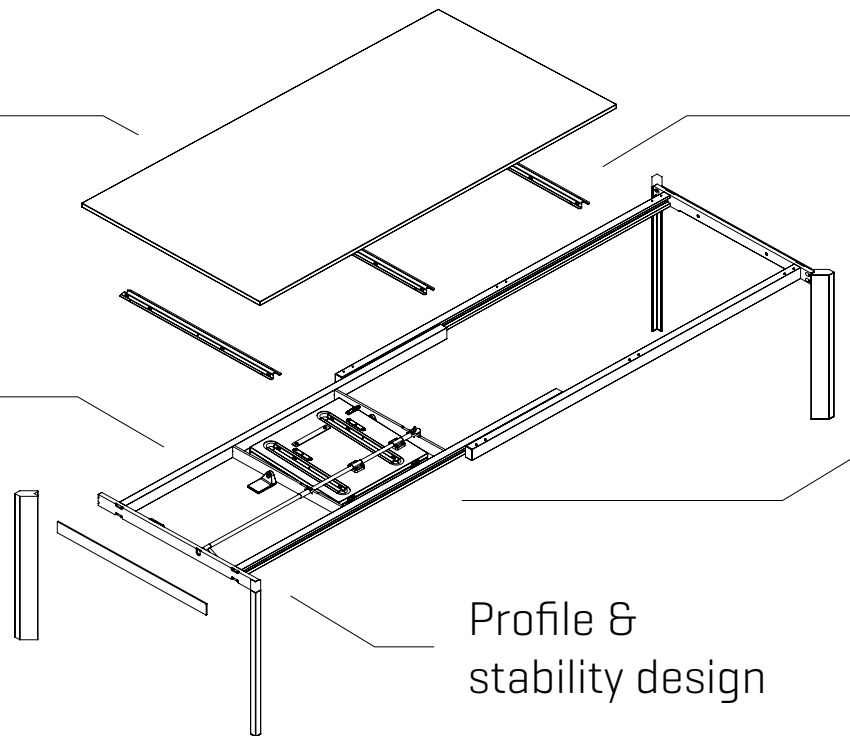

DESIGN & CONSTRUCTION ACCORDING TO YOUR REQUIREMENTS

Holistic table design

We develop tables according to your design ideas.

Extension development

We develop slides according to your requirements.

Customization design

Individualize your design through optimal accessories.

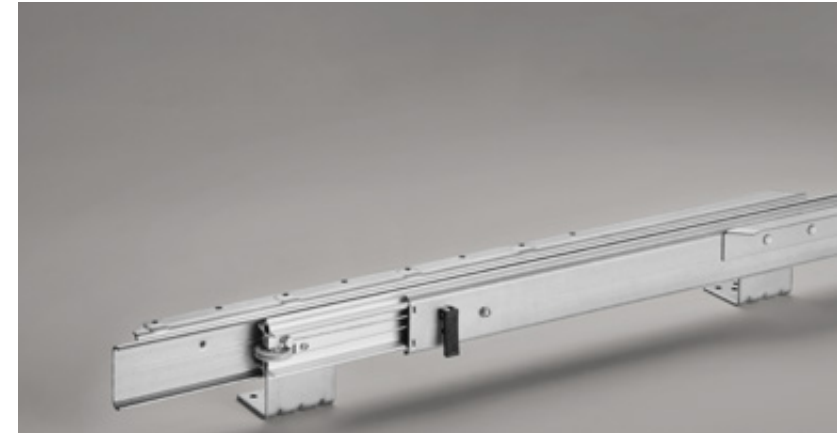

Movement & comfort design

Increase the comfort of your new product with the right folding mechanisms and various possible comfort improvements

Profile & stability design

Develop your custom-fit frame & rack solution

WHATEVER YOUR REQUIREMENTS, WE CAN FULFIL THEM

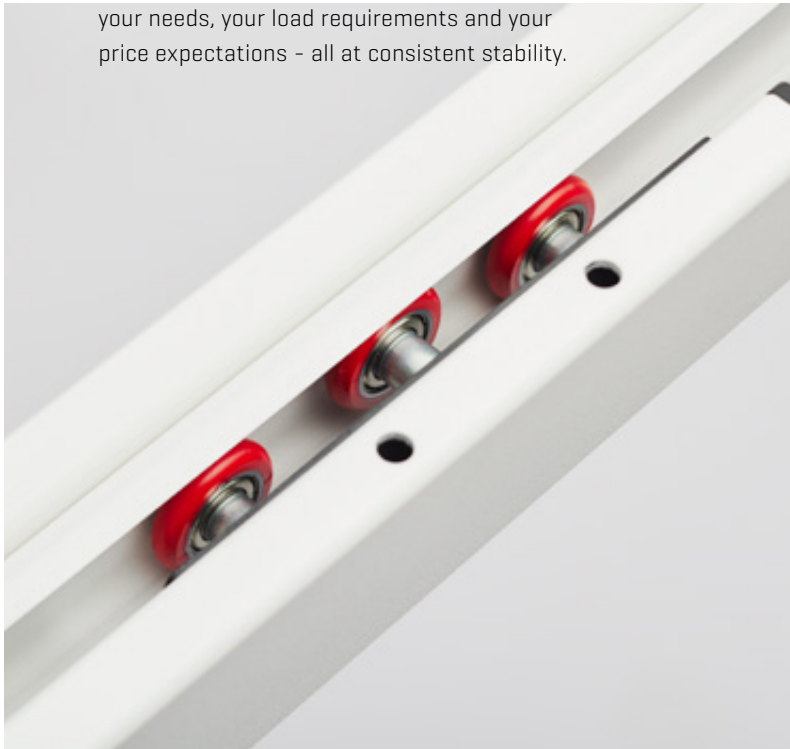

- We approach different price segments in the range of table slides:
 - 1. Price sensitive steel frames with ball bearing slides**
 - 2. Exclusive steel systems with roller slides**
 - 3. High-end aluminum systems with mounted on ball bearings oder roller bearings**
- We offer the possibility to combine existing frontends or your individual design with our assemblies to combine
- Our frames can all be combined with frontends and leg systems made of aluminum, steel and wood
- We offer particularly stable connections - special steel and aluminum traverses or adapter systems enable the optimal connection option for open or closed frame boxes, for various central substructures [such as table stringers, central leg or four-legged frames] or also for travelling table legs and e.g. U-racks
- We offer systems that are designed for a wide range of materials: Solid wood, wood-based materials, metals, HPL, ceramics, etc.
- All systems can be combined with different folding mechanisms
- We offer solutions for indoor and outdoor requirements
- We offer for all frame and rack solutions on commission packing and shipping

Extension development

Through variable processing of our materials, different running units as well as extensive accessory functions, we enable customer-specific pull-out systems with particularly smooth, quiet and precise running. Our pull-out fittings are tailored exactly to your needs, your load requirements and your price expectations – all at consistent stability.

Modern Profile Design

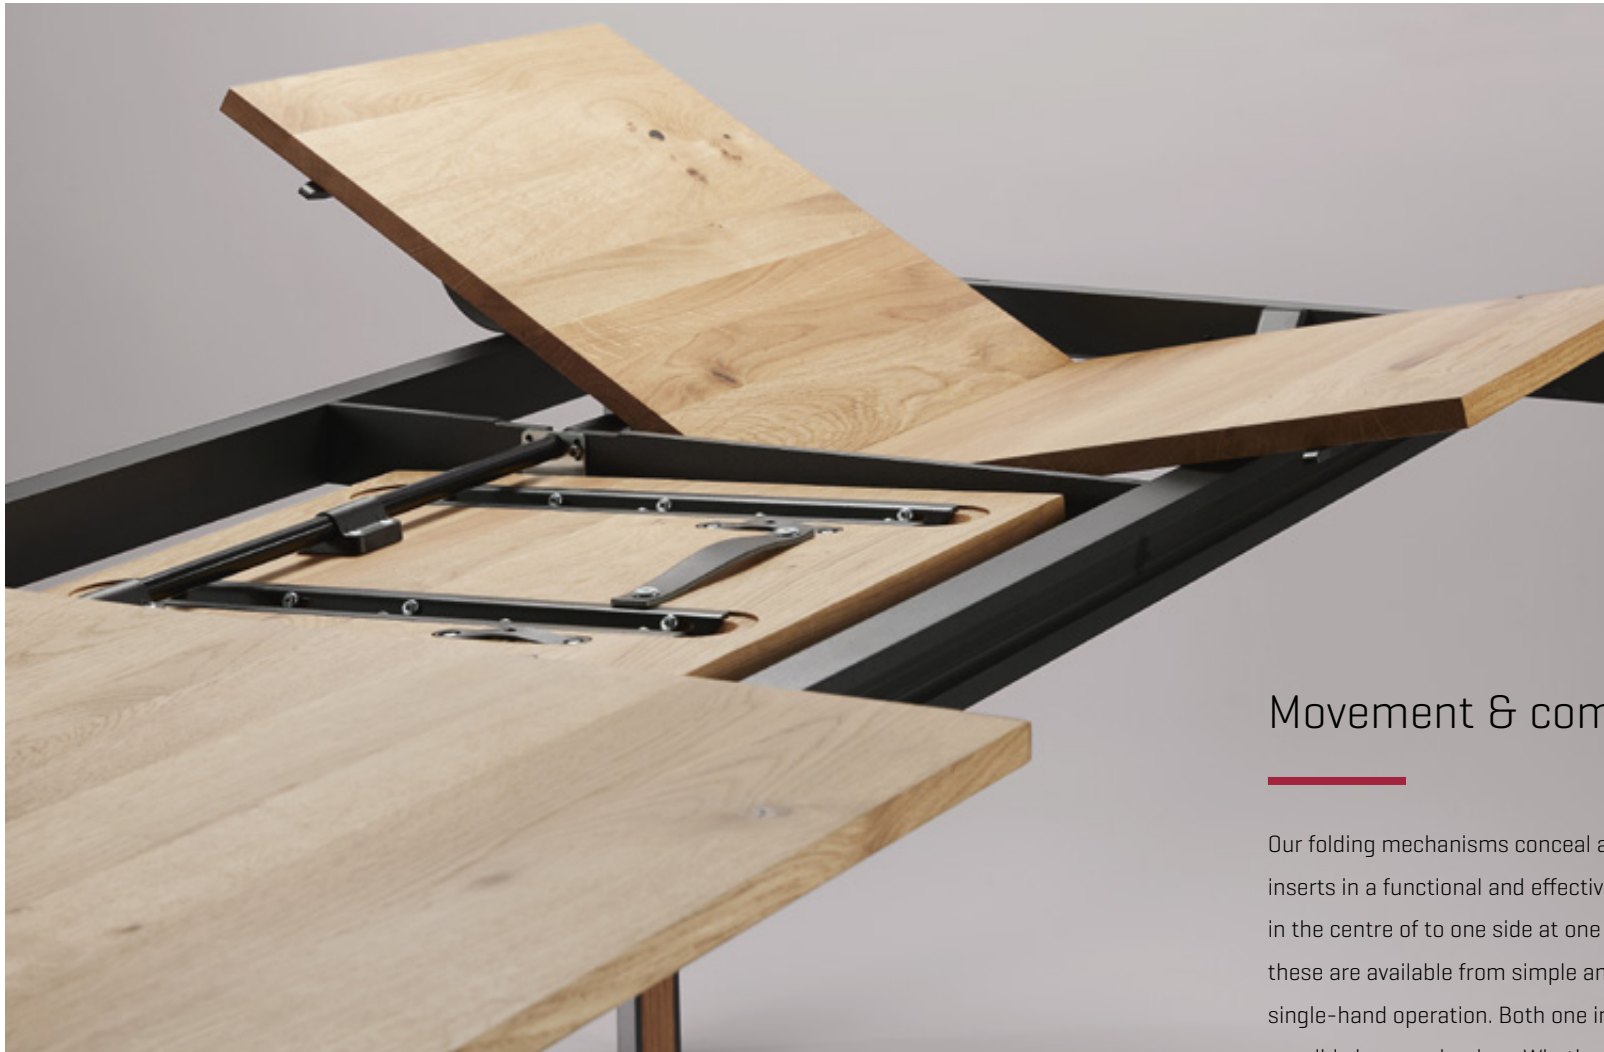

Many different leg geometries made of high-grade aluminum give you the highest possible freedom for individual design. We will not limit your ideas. Angular, round or free-form: all leg profiles offered are produced with our own tools in European pressing facilities with very narrow tolerances.

Strong Connections

Due to our decade-long experience, we have the right connectors for every table design, from the frame to the front-end and the table top. By connecting the front-end to special steel and aluminum traverses or adapter systems, we offer the perfect connector option and we guarantee you the highest possible stability at all times.

Movement & comfort design

Our folding mechanisms conceal and act as bearings for inserts in a functional and effective manner. Either positioned in the centre of to one side at one or both table front ends, these are available from simple and inexpensive to elegant with single-hand operation. Both one insert or multiple inserts are possible in a mechanism. Whether manual or movement-supported through springs damped in the end position – the folding mechanisms convince customers with their delightful functionality.

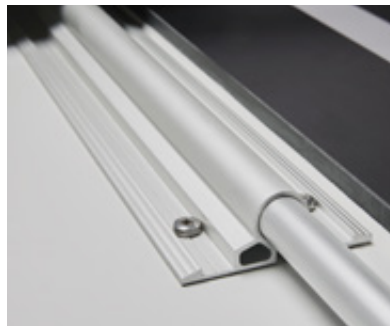

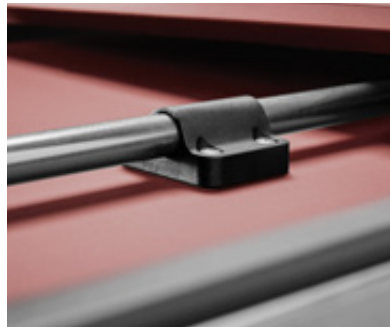

Holistic table design

Our expertise extends to holistic table design. Together with our customers, we develop on their name and according to their specifications.

Customization design

Smooth-running mechanisms, flat installation technology, individually developed patents and specially designed accessories - with our extensive range of accessories, we can create custom-fit systems to the highest solutions to the highest quality standards.
